

# Project Management Excellence

Agile Time to Market MVP Engagement Quality Innovation Risk Reduction

## Workshop Summary

Today, project management is an institution, a function, a discipline, much like manufacturing, R&D, and finance. As such, it requires continuous learning and improvement.

It should come as no surprise that project management can benefit from the same Lean and operational excellence principles than other functions have experienced. Among others, Lean thinking can transform project management toward perfect delivery (on time, on target, etc.), higher quality, improved speed, and more people engagement. New Lean insight can also help project management to become highly innovative, more agile, and much better at risk management.

This interactive workshop not only teaches the Lean principles, it also illustrates them with real examples and anecdotes from many years of experience in the industry.

**Date:** Wednesday, June 15th

**Time:** 8am-noon (Pacific)

**Venue:** online via Zoom

**Cost:** \$100 members (\$200 non-members)

**Register:** Email [jennifer@nwhpec.com](mailto:jennifer@nwhpec.com)

\*Earn CEU credits for PMP®\*

**Facilitator:** Norbert Majerus

Norbert is a lean champion, speaker, coach, book author, and Shingo Prize winner. Beginning in 2005, Norbert implemented a principles-based lean product development process at the three Global Innovation Centers of The Goodyear Tire & Rubber Company.
